

A large radio telescope dish is the central focus, pointing towards the night sky. The sky is filled with stars and the Milky Way galaxy, which is visible as a bright, cloudy band of light. The telescope is illuminated from below, and the ground is dark. In the background, there are snow-capped mountains under a clear night sky.

Welcome to  
Our Solar  
System!

# Indice

- ▶ Introduzione al sistema solare
- ▶ Il Sole: la nostra stella
- ▶ I pianeti del sistema solare
- ▶ I satelliti del sistema solare
- ▶ Asteroidi e Comete

# The Sun: Our Very Own Star

- ▶ The sun is the center of our solar system
- ▶ It's massive compared to the planets
- ▶ It's a star

# Planetary Pals: The Planets of Our Solar System

- ▶ There are 8 planets in our solar system
- ▶ They vary in size and composition
- ▶ Each planet is unique

# Moons and More: The Satellites of the Solar System

- ▶ Moons are natural satellites that orbit planets
- ▶ Some planets have many moons, while others have none
- ▶ Some moons are more interesting than others

# Space Rocks and Icy Wanderers: Asteroids and Comets

- ▶ Asteroids are rocky objects that orbit the sun
- ▶ Comets are made of ice, dust, and rock
- ▶ Both asteroids and comets have impacted Earth in the past
